By technology, the market is segmented into polyjet, fuse deposition modeling, stereolithography, and SLS. Amongst these, polyjet printing leads the market. By application, the market is segmented into personal 3D printing and commercial 3D printing. The segment of commercial 3D printing held the biggest share in the market and is expected to maintain its superiority throughout the forecast horizon.

The demand for 3D printing technology is on the rise owing to the ease of use of this technology in comparison to conventional printing methods. The rising application of 3D printing in numerous application sectors including automotive, medical, and electronics will stimulate the market for 3D printing in the coming years. In addition, the increase in the count of 3D printing service centers and the low cost of printers has raised the demand for this technology for personal use.

Geographically, the market is segmented into North America, Europe, Asia Pacific, and Rest of the World. North America led the market and is trailed by Europe. This is due to the exponential increase in the healthcare, medical, automotive, and aerospace industries in this region. However, Asia Pacific will exhibit the swiftest growth in the forecast horizon.
